Logline

“Testhuva” is a narrative puzzle platformer in which the player takes on the role of ‘Eve’ in order to find a way out of hell as well as the reason why she ended up there. The atmospheric areas of the rather unusual hell invite players to explore and challenge them with tricky puzzles. The inhabitants of hell are also a mystery that must be solved.

“Testhuva” is available for all platforms and is rated 12+.

The name is made up of the words Teshuva and Test. Teshuva is the Hebrew word for return in relation to atonement, and Teshuva is also often symbolically described as fools.

Synopsis

At the beginning, our heroine wakes up in a cave with no memories. Confused, she follows the only way out, which leads her to the inner edge of a huge dome, in the middle of which is an artificially lit city on stilts. On the way, she sees a small boy who seems to be talking to a cat. Eve approaches and Yomio introduces himself to her. He tells her that she is in hell and that there is no way out. He advises her to go to the station first and then disappears. Eve is able to cross the abyss on a streetcar and travel to the train station in the city center. Here she is welcomed in a café by a barista called Sophia, who is part machine. She explains to her once again that the city in the dome is hell and that there are only a handful of people who live here. She also tells her that there is a gate to the outside, but that it is always locked and guarded by a person. Eve then takes the streetcar to the exit and tries to persuade the guard to let her out. He doesn't let her through, of course, but tells her that she can earn entry by solving four puzzles. But he won't tell her what the riddles are. Frustrated, Ava makes her way back to the station. On the streetcar, she meets Yomio, who shares her frustration with the riddles and advises her to look around the city to find clues to the riddles.

Back at the station, Eve talks to Sophia again. During the conversation, the barista mentions that she would like to see more of the station, but that it is so dirty that she doesn't dare leave the café. She asks Eve to check the market district for suitable cleaning utensils. After some searching, Eve finds a cleaning machine in the market district, which she takes with her to the station. Sophia shows her gratitude by giving Eve a pair of shoes. With the new shoes, which can be used to perform a double jump, Eve is able to explore more of the market district. She can now also enter the gardens.

Here she meets Vera, the gardener. Vera is furious because she has lost her mirror, which she used to bring light into her gardens, which are now infested with twilight plants. The entrance is blocked with thorny vines. She believes that someone from the Undercity has stolen it and asks Eve to look for it there and bring the mirror back. Vera says that there is a hidden way to the Undercity in the train station. So Eve goes back to the station, which now looks much nicer than before. Sophia has cleaned the area in

front of the café thoroughly and decorated it a little. However, she says that the transformation is not yet complete and that she needs items from the market district, but is in no hurry. Once Eve returns with the materials, after a bit of waiting, the repaired vending machine is revealed. Here Eve can buy clothes and other cosmetic items with the currency she finds. On the way to the Undercity, Eve notices a shadow that seems to be following her. There is hardly any light in the Undercity and Eve begins to feel anxious. There are many blocked paths, giving the impression that our heroine is at a dead end and that there is no way forward or back. Eve begins to doubt that she can manage to find the mirror or even find her way back. The shadow she has been trying to escape comes to her aid, and together they manage to navigate through the Undercity and find the mirror. The shadow gives Eve the ability to shadow step, which allows her to walk a certain distance through certain objects, in exchange for Eve carrying the shadow with her so that it can leave the Undercity.

With the help of the shadow step, Eve finds a shorter way back to the garden, where she gives the mirror back to the overjoyed Vera. Vera is able to chase away the vines at the entrance, but the garden is in chaos and the mirror construction inside is all messed up. She asks Eve to put everything in order, as she is afraid to enter the garden herself because there are signs that a dangerous plant has taken up residence inside. She conceals this from Eve and gives an excuse as to why she won't go herself. In the garden, Eve tries to fight the chaos. A little further in, she finds Yomio, who gives her a tip that she can use some plants to temporarily clone herself, which helps her to fight her way through the chaos of the garden. In the end, she manages to banish the dangerous monster plant from the garden. Vera thanks her and asks Eve to forgive her for putting her in danger for the second time. To make amends, she gives Eve a plant that can latch onto things, helping her to open things and swing across chasms. Vera invites Eve to visit the garden at any time and help remove the rest of the vines, provided she wants to enjoy the garden in all its glory.

When Eve returns to the station, Sophia is nowhere to be found. She discovers tracks on the ground that lead her to the palace. Once there, she learns that Yomio has kidnapped her friend. To get her back, Eve sets out to cross the obstacle-laden palace. Yomio keeps putting obstacles in her way to annoy her. In the end, the two come face to face and Eve has the opportunity to kill Yomio. Yomio threatens to hurt Sophia, forcing Eve to strike him down.

When she does, the body dissolves and Yomio, whose clone suffered the attack, appears. He explains to Eve that they are in a simulation that is there to test AIs in various ways. On logical thinking capacity, on a range of human emotions such as the desire for freedom, empathy, self-doubt, interest in art, and hatred, as well as the ability to break the robotic gestures. He tells her that she has passed the test and the gatekeeper's riddles. She is willing to get a real body in return and be one of the first new humans to revive humanity after its demise.

Here Eve can choose to accept her fate and leave the simulation. However, if she realizes that her will to freedom may have been pre-programmed and she wants to

fight it, she can also make the decision to take Yomio's place, so that he can leave. From now on, she would supervise the tests of the following AIs and Yomio, who has also successfully passed the test, would be released from his duty. But when Eve has spent enough time with Sophia, she can't accept that everything isn't real, as the relationship she has built has triggered real emotions in her. She is devastated as her reality was never real. To spare others this misery, Eve decides to hack into Yomio and destroy the simulation along with all its inhabitants, including herself. She doesn't care that she is destroying the future of humanity, as the humans have put her in this cruel situation.

If Eve has talked to Vera long enough and learned that you can forgive and still make something good out of bad prospects, she is still destroyed, but not so hopeless. She resists her fate and makes a decision of her own, symbolically and actually breaking away from her creators and her purpose. She erases Yomio's memories, except for the fake ones he was given when he first arrived in Hell, and cuts off the simulation from outside control. She destroys the dome and brings light into the world where she lives with the other inhabitants from now on.

Aesthetic of the Virtual World

The entire game takes place in the dome, which is known to the player as Hell. In the center of the dome is a city on stilts, which also houses a kind of “undercity” underneath. Along the edge of the dome there are also places that can be walked on, such as a square in front of a huge gate. The dome appears to be made of stone and it is therefore dark inside. Everything is illuminated by artificial light, such as street lamps or candles.

The city itself is similar in architectural style to modern Tel Aviv and its old town. The color palette is also rather oriental with lots of ochre and red. The city is surrounded by a sandstone city wall and its interior is adorned with a multitude of narrow alleyways, wide main streets and fantastic gardens. Streetlights, streetcars and other

technologies are reminiscent of the 20th century. The town is deserted, with only a few people living here. Most of the inhabitants are cats, lizards and gazelles. In general, the city gives a timeless feeling, as if the people who lived here have only recently disappeared. Nevertheless, everything continues to function. There is a large gate at the edge of the dome, which can be reached by light rail. In addition to the train station, which is located in the center, there are 4 other areas that are slightly larger.

The first area is the market district. The market district is located near the center of the city and is therefore very similar in appearance. There are many lamps that provide light and the colors are dominated by the yellow of the sandstone. Nevertheless, this area is more colorful than the rest of the city, there are many stalls, tents and carts around, displaying a variety of goods and decorating the place with different colors. You can feel how chaotic it would be here if people lived here. There are lots of crates around that can be interacted with. The canvas roofs of some stalls can be used like a trampoline and there are winches that can be used to move things around. The market district stretches across several stepped streets, giving the area a certain verticality. There are several items hidden in this area that are needed for quests.

The second area is the lower city. The Undercity is located beneath the platform that supports the city above and consists largely of roughly cobbled-together platforms and huts. There is hardly any light here and apart from a few street lamps that have fallen down from above, the only sources of light are small fires.

The colors here are mainly black and grey, next to the yellow and orange of the fires. Shadows can be seen flitting around again and again, but they are not assigned an owner. The area is windy and the many holes and crevices that expose the pitch-black abyss give the player a feeling of uncertainty and danger. There are also always large puddles of oil on the ground, in which your own shadow appears and the surroundings are not perfectly reflected, but slightly differently. The paths are often blocked or impossible to reach, but you can use your shadow to create paths or find detours. Some platforms are simply too far away to cross with the available abilities on the first visit.

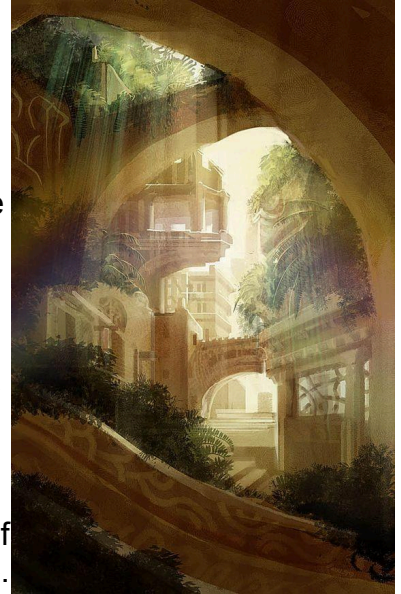

Next we have the gardens. In terms of color, the gardens consist mainly of the green of the plants and the gold of the light, but brown and purple are also added by the invading plants. The flowers and fruits that grow regularly in the garden add color accents in red, blue, yellow and pink to the green background.

The garden is dotted with mirrors that focus light from outside the garden to allow the plants to grow and survive. Mirrors can be rotated or repositioned to give light to certain plants or take it away from others. For example, thorny vines disappear when a cone of light is directed at them and some plants die without it. A certain type of plant that grows in the garden gives the player the opportunity to clone itself for a short time when interacting with it. There are also water channels that can be diverted to can be diverted for your own purposes, which can also affect plants.

There are also piranha plants in the garden that will snap at you if you get too close and touching thorny vines also causes damage.

At the beginning, there is also a large thorny plant that needs to be driven away. At the entrance to the gardens you will find Vera, who usually looks after the plants and with whom you can interact.

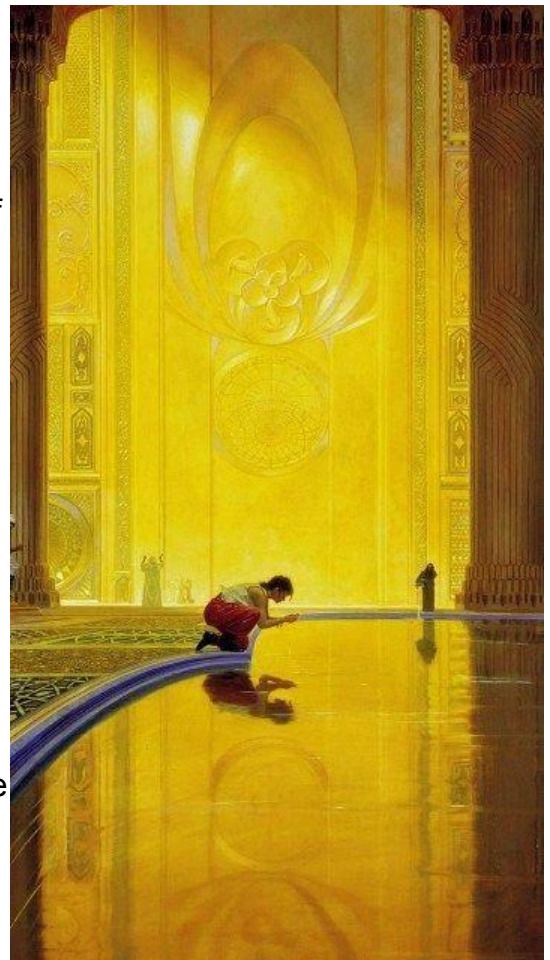

The last area is the palace of the city. Like almost all the other buildings in the city, the palace is made of sandstone, but is opulently decorated with gold. The palace has many rooms with open balconies from which you can see down into the city. In general, the palace feels very open and outdoorsy, with a variety of fountains, pools and plants adorning the interior. The dominant colors are gold, blue and green. The flowers that make cloning possible can be found in the palace and can be used. Eve can also reflect herself in some pools of water and use her shadow. There are also rune stones that can be used to teleport from one stone to another with the same symbol. The rune stones can be picked up and carried. In the palace, Yomio often talks to Eve and she can decide what to do with him towards the end.

Small details in the background keep changing over time, such as a flickering lamp or a sloping bench being replaced. It can also happen that small “glitch” flicker effects occur depending on the decisions made.

The perspective in which the player moves through the world is a 2D side view.

Small collectibles are hidden throughout the game, providing the player with additional information about the game world.

Character development

There are not many characters in “Testhuva”, which fits in well with one of the game's themes, loneliness. In total, there are four characters, including the protagonist, who play a somewhat larger role.

Eve

Physiological dimension:

Eve is a 15-year-old girl, with a rather small and slim build. She looks like a typical teenager and wears a school uniform consisting of a beige shirt with a gray skirt and black jacket. She also wears gray socks and sneakers. Eve has blue eyes, fair skin and reddish-blond hair. Her facial expressions are rather withdrawn, but she is not shy about showing her feelings. She uses a lot of youthful language, which is why she is often misunderstood by others.

Psychological dimension:

Eve likes to play chess, sings well and has a passion for idols. She tries hard at school because she wants to attend a good university. In terms of character, she is rather cool and collected, but also shows motivation and curiosity. Eve suffers from amnesia and wants to find out why she ended up in hell or is trying to break out of it. The things she can remember are her parents and going to secondary school.

All the memories she has are not real because she is an AI.

Sociological dimension:

Eve has parents and friends, but she can only remember them superficially. In Hell, she quickly makes friends with Sophia and Vera. She often interacts with Yomio, but the two do not have a particularly close relationship. “Guardian” sees her as an enemy, as he prevents her from achieving her goal.

Archetypal function:

Eve slips into the classic role of the hero or heroine, as she is the main character of the game who has to overcome obstacles to reach her goal

Sophia

Physiological dimension:

Sophia is around 28 years old and the only employee in a café at the station. She has a friendly face and appears motherly. She wears the café's apron, usually has her brown hair tied up and has a soft, soothing voice. She has a birthmark under her dark eyes on the left side. One of her arms is clearly a robotic arm, which can be seen as the paint has been scraped off there.

Psychological dimension:

Sophia is an early riser who likes to cook and paint. She likes her job in the café and wants her guests to feel welcome. She secretly longs to leave the station, but her mysophobia means she barely makes it out of the café. Sophia is not good at understanding sarcasm and is very sensitive to caffeine. She can't understand why Eve tells her she's a robot.

Sociological dimension:

Sophia was raised primarily by her mother, but she has worked at the café for as long as she can remember. Her memories of a life before are, like Eve's, not real.

Archetypal function:

Sophia takes on the role of mentor in the game. She welcomes the heroine at the beginning and gives her information about the world. Her café also serves as a retreat between levels.

Vera

Physiological dimension:

Vera is a short, plump woman in her mid-40s with long blonde hair and brown eyes. She has a green thumb and a broad knowledge of flowers and their properties. She is a hard worker and spends most of her days tending to the city's flowers. She always wears green dungarees and rubber boots.

Psychological dimension:

Vera is a rather withdrawn and reserved person. She enjoys talking to others, but prefers animals and especially plants. She likes to show others the beauty of the garden and the fruits of her hard work, but has had to learn the hard way that not just anyone should be allowed into the garden. Vera is rather timid and tries to avoid dangerous or unpleasant situations, so she always stays in her garden, which is all she needs. She feels bad when she lets other people do things for her and is then quick to apologize, but she is not able to get over her fear enough to do it herself.

Sociological dimension:

Vera is familiar with the other inhabitants of Hell, but she rarely interacts with them. She only interacts with others when people visit the garden. Vera once tried to grow coffee beans with Sophie, but it didn't work. Vera thinks it's because of Sophie's inability with plants.

Archetypal function:

Vera serves partly as a herald and mentor, as she gives our heroine a task and presents her with a gift in return. She also has a bit of a shadow in her, as the assignments she gives Eve are relatively dangerous, of which she is aware.

Yomio

Physiological dimension:

Yomio is a boy of about 14 with black hair and almost white skin. He is quite short, even shorter than Eve. He wears a pointed black hat and a kind of black robe. Yomio has a mischievous demeanor and a mysterious aura about him.

Psychological dimension:

Yomio wants to motivate others to fulfill their goals. He always points Eve in the right direction. When he sees it as necessary, he lies without scruples. He tries to express himself ambiguously and enigmatically in order to maintain his mysterious aura, but he is less successful at this than he thinks. In reality, Yomio is the "King of Hell", meaning he watches over the simulation and guides other AIs through it. The creators of the program occasionally request data from him, which is why he is often seen talking to the animals.

Sociological dimension:

Yomio is an AI that was once endowed with false memories, but he knows about them and distances himself from them.

Archetypal function:

The King of Hell fulfills the role of Herald, as he often sparks motivation in the hero and also provides direct guidance on what can be done next. Depending on the decisions made in the game, Yomio can also take on the role of the Shadow. He stands for what Eve is to become and manipulates her to do so. If Eve decides against her destiny, the two become enemies.

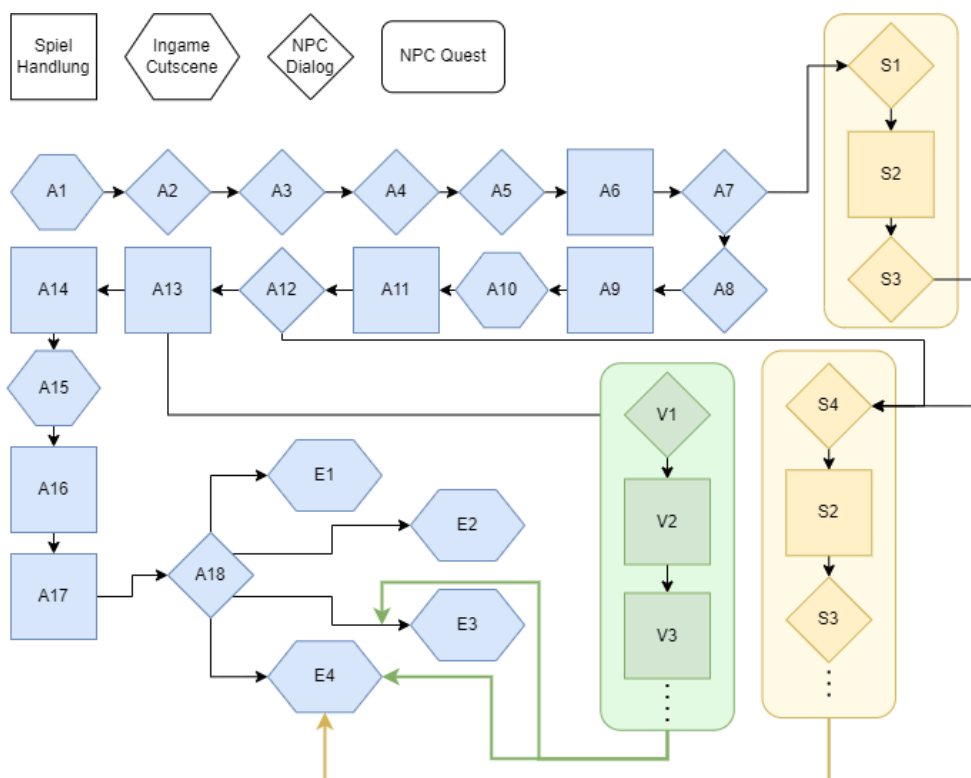

Dialogue and Sound

There is a lot of dialog in the game, as the plot is mainly carried by the conversations. conversations. The dialogs take place via text boxes in visual novel style style. There is no voice-over, but every now and then sounds are made that emphasize certain emotions. Each person has their own font, which represents the sound of the voice.

In some dialogs, there is a choice of response options that can change the course of the conversation. change the course of the conversation. At the end, for example, you can use a dialog box dialog box to choose which decision to make, which then triggers the respective ending. The NPC quests are mainly about dialog, each of which revolves around a topic that deepens with each progression of the quest. For example, the theme of the Sophia quest is the difference between humans and machines. Eve thinks that Sophia is a machine because she has a robotic arm. Sophia doesn't know why Eve says this and insists that she is human. The two discuss this for a while, touching on philosophical issues that are crucial to the ending.

By dealing with this issue, it hits Eve much harder at the end that she is a program, as she had deeply convinced herself of her humanity. The third ending is only possible by completing this quest. And the fourth ending is only possible by completing this quest and the Vera quest. By completing both quests, in which Eve talks at length with both of them, they become friends and only by discussing forgiveness and making amends or avoiding mistakes with Vera and having another friend is Eve able to contain her anger and have hope for the future.

Narrative Navigation Plan

Module		Continues to
A1	Eve wakes up in a cave.	A2
A2	She meets a small boy Yomio, who explains they're in hell.	A3
A3	Eve takes the tram to the city. She meets Sophia at the train station café and finds out there's a gate leading out.	A4
A4	There's a guard at the gate who only lets those pass who solve 4 puzzles. Yomio tells her to look around.	A5
A5	Back at the café Sophia wants Eve to bring her something from the market.	A6
A6	Eve checks out the market area and finds a cleaning robot.	A7
A7	Eve hands the robot to Sophia and receives the double jump sneakers.	A8 + S1
S1-3	After A7, Sophia's optional quest is unlocked. You talk to Sophia and help her. The first mission unlocks the vending machine.	S4 from A12 on
A8	Eve enters the garden, Vera asks her to retrieve her mirror.	A9
A9	Eve navigates to the Undercity, where she's chased by a shadow.	A10
A10	Eve and the shadow unite and Eve becomes stronger.	A11
A11	Eve and her shadow find the mirror and return to the garden.	A12
A12	The garden can now be opened with the mirror.	A13+S4
S4-6	If A12 and S3 are completed, the second part of Sophia's quest is unlocked.	
A13	Eve frees the garden from intruders.	A14+V1
V1-3	If A13 is completed, Vera's quest is unlocked, where you can talk to her and help in the garden.	
A14	When Eve returns to the train station, Sophia is gone. But there are marks.	A15
A15	The marks lead to the palace, where Yomio admits he kidnapped Sophia.	A16

A16	Eve traverses the palace to find Sophia.	A17
A17	In the throne room, Yomio threatens to hurt Sophia, so Eve strikes him down.	A18
A18	The real Yomio appears and explains to Eve what happened. He congratulates her for successfully completing the simulation. Eve now has to decide whether... → ...to fulfill her purpose. → ...to take Yomio's place in hell. If S, but not V are completed: → Eve is devastated. If S and V are completed: → Eve avoids control.	E1 E2 E3 E4
E1	Eve accepts her purpose and takes control of a human body in the real world.	
E2	Eve accepts her role, but lets Yomio go and takes over his role as an overseer of the simulation.	
E3	Eve is devastated with the fact her whole being was a lie and destroys the simulation, including herself.	
E4	Eve can't accept her fate and decides to reset Yomio and separate the simulation from the real world. She takes control over the simulation and makes it into a cozy home.	

Ludology

As the game contains different areas in different regions, you can call up a map at the touch of a button to see the game world at a glance. The individual areas are displayed in different colors to make it easier to distinguish between them. The player's position is shown with its own icon. Quest markers show the general direction in which the player must go. However, there are no minimap or markers in the form of a HUD during the game; markers and areas are only visible in the map menu. The player should therefore primarily be able to navigate the levels themselves, which are also kept linear in relation to the main mission. The player only has to deviate from the main path for collectibles.

As mentioned, the interface does not require a minimap. A life meter is also not necessary as the player does not fight. There are a few death conditions, such as falling into a ravine or deep water, being crushed by an object, touching thorny vines, being eaten by a piranha plant or being hit by a monster plant. If you die, you are reset at the last direct cone of light you were standing in. There is usually no time limit, only in a few platforming passages where you run away, you have to maintain a certain speed.

Our HUD is therefore very minimalistic and only shows a pop-up with the symbol for the interaction button in the case of a puzzle object or NPCs that can be integrated. Otherwise, only the current section of the game and Eve are visible on the screen. Glitches occur in the form of distorted visuals in sections where the player makes decisions that go against the normal course of the game.

Over the course of the game, Eve learns a range of skills. At the beginning there is a jump, which later becomes a double jump. Next, she can control her shadow as long as a reflective surface is nearby. The second joystick and the directional pad on the controller are used for this, allowing you to control the shadow in exactly the same way as Eve, only in reverse. Next up is the shadow step, which allows Eve to jump a short distance straight ahead while running or in the air and pass through small objects or boundaries. The snap plant, which can be used to pull objects towards you or swing along the ceiling, also has its own designated button.

The areas are a mixture of puzzle and platforming passages. Each area has its own mix, some have more platforming, some have more puzzles. The story only allows you to explore part of the area at a time, as some sections require skills that you only get later. Quests and collectibles encourage the player to revisit old areas and explore them fully. Once the game has been completed and the player has reached Ending 4, they can return to the game world to complete further quests in which the station is gradually cleaned up and decorated. Yomio will also join the station and give us quests. A platforming level is also unlocked in the palace tower, which is the most challenging and longest in the game.

Depending on the level, you can interact with obstacles in different ways to progress through the level. Crates can be moved by pressing a button, while winches and mirrors can also be operated with a button. The rune stones for teleportation can be picked up and released with one button and used with another. The Springpad and Shadow mechanics, on the other hand, are activated by running onto a field within the level. Fast Travel can also be activated using the light rail by pressing the interaction button. Collectibles such as coins or power-ups are also collected by running through the level.

The gatekeeper who has set the four puzzles serves as a progress monitor. Not only can you check with him how many puzzles you have solved, but you can also see how many collectibles you have found, how many are still missing and what your quest progress is. You can also see how many collectibles have not yet been found in each area. Here you can also play all the puzzles again individually after completing them.

You can talk to NPCs by standing in front of them and pressing the interaction button. This allows you to accept quests, progress in quests or have a dialog. Resources are coins that can be found within the levels and can be redeemed for non-essential items at vending machines. Non-essential items are, for example, different clothes for Eve and furnishings for the train station.

In terms of sound design, each level has its own background music. The station as a hub has a calm and ambient track that is intended to give the player a sense of security. The individual levels should have different pieces of music that match the visual style. The garden should be accompanied by music reminiscent of nature, whereas the palace, for example, sounds dramatic and has a powerful undertone.

Other Basic Media

For the setting in hell, we were not inspired by the classic Christian interpretation, but by the Jewish approach in Gehinnom. Gehinnom is not so much a hell with fire, but rather a lonely grave in which you are judged by your deeds during your life and you become aware of the shortcomings and negative actions of your existence. Jewish mysticism defines it as a kind of waiting room for the soul. Rabbinic teaching sees it as a place where souls are purified and, after purification, which takes a limited time of a maximum of 12 months, ascend into the world to come. We have reshaped these approaches for our game in such a way that it results in a world that suits us. Loneliness became our abandoned city, the judgment of our own actions became the surveillance of scientists during a test, the cleansing over time became the individual levels and finally the transition to the world to come became leaving the simulation after completing all the tests.

We also found inspiration in other games. The Talos Principle is a puzzle game from 2015 in which you play a robot with a human consciousness who has to solve a series of puzzles within a variety of environments. The narrative revolves around the robot being guided by an entity called Elohim and in the end either joining Elohim or escaping him and waking up in an android body.

The game itself draws a lot of inspiration from the relationship between man and God and deals with many philosophical themes. We wanted to distance ourselves from being too similar by having the role of scientists play a comparatively smaller role throughout the narrative and having the world inhabited by other NPCs as well. In this way, our game would go more in the direction of traditional 2D roguelikes, which were also an inspiration. In this case, we didn't have a specific game that influenced us, but the genre itself. Systems like permanent upgrades, which make the levels easier, or a central hub from which you run through the levels like dungeons, are what we wanted to implement for our gameplay. The difference with us is that we don't have a combat system. In the virtual world, we used cities in the Levant as well as fictional steampunk settings as models. Specifically, in our research we looked for images with color concepts in ochre or red, showing narrow alleys, wide main streets and botanical gardens. Since our time is supposed to be a mixture of the Middle East and the twentieth century, images in these two areas were the main template.

Meaning of the Game

The themes that our game deals with include artificial intelligence, humanity, existentialism and loneliness. The twist that your character is not a human in hell, but an AI within a simulation, is intended to raise the question of what it is that makes a person human. If an artificial intelligence can think it is a real person, how does that differ from a human being's ability to think the same? It's about identity, Eve as an AI struggles to

prove her humanity. It's also about what you can perceive as reality. The setting of hell and the feeling of being trapped in it is meant to challenge the player's understanding of reality. Ultimately, an AI's journey to prove its humanity and escape a hellish existence represents the universal human desire for self-discovery, freedom and meaning.

The NPCs in the game embody AIs who are here for the same reason as Eve, but they have failed one or more tests and have therefore never had the opportunity to leave the simulation. Unlike Yomio, who was the first AI to pass the test and therefore has the task of guiding others through it. Although the other NPCs have their flaws, we can build a relationship with them, which is to show that we can all be friends even though we are not perfect.

No one is really alone if you make a little effort.

Overall, the game is intended to offer the player a thought-provoking and emotionally engaging experience that questions what it means to be human, if the essence of "being human" exists at all. The option of multiple endings symbolizes a person's freedom to take control of their own destiny. The scenario in which Eve becomes the new ruler is meant to represent the ability to overcome one's own limitations.

Ironically, the endings in which you do not successfully complete the test and do not leave the simulation are the ones in which Eve makes the most human decisions. In the endings, for example, she decides against her destiny, suffers an existential crisis and makes the decision to destroy herself and everyone else out of anger and hopelessness. This proves that the simulation was wrongly conceived from the start and doomed to fail.

Implementation Concept

The game contains challenging platforming passages that are not overly difficult. It is not intended to fall into the niche of hardcore games, but to reach a broad audience who want a challenging game that is not frustrating. The unique concept, coupled with the atmospheric setting, would be at the heart of a marketing strategy. Eve's journey through hell, with increasingly difficult puzzles and passages where strange events such as glitches raise questions about what exactly this world is, should be compelling enough to encourage play. Since the game delivers a twist at the end, new players can be won over by those who already know the ending. The game could thus be marketed as a philosophical experience.
